

## General ENT Clinic

The Right Nose clinic is focusing on to deal with Ear, Nose and Throat related problems on the highest level. Our clinics are equipped with the newest technology including instant access to CT and MRI imaging. Most of our procedures are performed as a day case surgery, which mean after couple hours, you can go home leaving the problem behind.

In more complex cases we might suggest a stay overnight in our state of the art hospital.

## Ear Services

Hearing is one of the fifth senses and like any others, its crucial to maintain connection with our surrounding environment. The function of our ear to receive sounds from our surrounding environment and transmit these signals to our brain.

A mechanical air pressure wave ( sound) creates movement on the eardrum which is linked to small bones which in turn transmit the signal towards to our inner ear (cochlea). Any condition which interrupting of sound transmission can cause hearing reduction.

### Common ear condition and treatment:

- Discharge / pain / infections
- Management Eustachian tube dysfunction
- Repair of the eardrum
- Ventilation tube insertion - grommet
- Reconstruction of damaged ear bones - Tympanoplasty
- Mastoidectomy
- Implantable hearing aids
- Narrow ear canal widening

## Ear Services

In recent years changes in surgical techniques have made it possible to reconstruct or rebuild diseased hearing mechanism in most cases. Also with the new advantage of IT technology small microchip - Bone Bridge or Cochlear Implantation- also could be inserted to give back your hearing.

## Nose and Sinus Services

The function of the nose is to warm, humidify and filter the air before entering the lungs. Daily around 10,000 liters of air travels through our nose. Recurrent infection, enlargement of nasal turbinate or deviation of nasal septum will reduce the nasal airflow and the ventilation of the sinuses therefore the unique nasal function will be altered. The goal of our treatment is to reestablish the normal nasal function again.

### Consultation Regarding Nasal Problems

It is advised to visit us, if you are concerned about:

- reduced nasal breathing
